FOOD AND AGRICULTURE ORGANIZATION OF THE UNITED NATIONS
Rome, 1999

PREPARATION OF THIS CIRCULAR

This paper is based on a report by Ian Pettman[1] commissioned by the Fishery Information, Data and Statistics Unit (FIDI) of the Food and Agriculture Organization's (FAO) Fisheries Department (FI) to assist the FAO Fisheries Branch Library in a complete review of its periodicals collection. The study was carried out between July to October 1998.

The review, after discussion with, and endorsement by, the Fisheries Department Library Committee and Fisheries technical staff, would form the basis of the fisheries periodicals collection development and maintenance strategy. The Library Committee recommended that the review be adapted for publication to reach a wider audience.

Comments on omissions and gaps in the periodicals collection would be welcome. Please send to the FAO Fisheries Library fi-library@fao.org

Pettman, I.; Collins, J.
Fisheries periodicals in the FAO Library: review of an international collection.
FAO Fisheries Circular. No. 951. Rome, FAO. 1999. 54p.

ABSTRACT

A complete review was made of the collection of almost 2 000 periodicals titles on fisheries, aquaculture and related aquatic sciences held by the Fisheries Branch Library (FBL) of the David Lubin Memorial Library (DLML). An examination of FAO's present and past strategies identified relevant criteria for evaluating the relevance and importance of each title. The main criterion was relevant subject area. The criteria were ranked in a series of five facets. Each periodical title was analysed against the facets and allocated a code which determined whether the title should be kept, kept for a time limited period or disposed of.

From the analysis, a core collection of over 1 700 titles is identified, with 200 titles identified for disposal. Listings of titles are included. The effectiveness of the previous collection policies was evident when virtually no gaps in respect of titles missed could be identified. Unfortunately, other gaps are beginning to appear in the collection caused by the declining periodicals budget, problems with the exchange programme and the termination of some of the Aquatic Sciences and Fisheries Information System (ASFIS) work.

The paper discusses issues such as alternative access to periodicals via digital means, collection development, maintenance and disposal policy. The review process which was developed and its recommendations are relevant to many library situations, including national fisheries institutions, as well as decentralized and specialized libraries in many fields.

1. BACKGROUND

1.1 FAO's Origin and Constitution

As background to the review, a brief introduction to the role of FAO, and in particular the changing emphasis in the work of the Fisheries Department, is presented. This provides the context within which the Fisheries Library has operated over the years and has been a determining factor in building the collections of literature, which it maintains.

On 16 October 1945, forty two countries acted in Quebec, Canada, to create FAO, the Food and Agriculture Organization of the United Nations with a mandate to raise levels of nutrition and standards of living, to improve agricultural productivity, and to better the condition of rural populations.

At present FAO is the largest autonomous agency within the United Nations system with 176 Members in October 1999.

The idea behind FAO's creation and the broad objectives of the Organization are set out clearly in its Constitution (FAO. 1994). The manner in which these objectives are to be achieved is set out in Article 1:

Functions of the Organization include:

1. The Organization shall collect, analyse, interpret and disseminate information relating to nutrition, food and agriculture. In this Constitution, the term "agriculture" and its derivatives include fisheries, marine products, forestry and primary forestry products.

2. The Organization shall promote and, where appropriate, shall recommend national and international action with respect to:
(a) scientific, technological, social and economic research relating to nutrition, food and agriculture;
(b) the improvement of education and administration relating to nutrition, food and agriculture, and the spread of public knowledge of nutritional and agricultural science and practice;

Obviously all of the functions of the Organization are relevant for the work of the Library, providing information in support of the work programmes of FAO Departments and Field Projects is a priority. The above points from Article 1, however, give an indication of the great emphasis placed on information by the Organization as a whole, and of the broad spectrum of external users for whom this information is provided. These range from national governments to the international community and from the general public to educational and research systems. The FAO Library collections and services reflect these wide ranging information activities across the agricultural and rural development sectors in their broadest sense.

FAO is regarded by its global user communities to be both a centre of excellence and the lead agency for agricultural, fisheries, forestry and rural development. The Organization aims to fulfil its mandate on the basis of the expertise of its staff, the accumulated knowledge base and the range and quality of its data and information services.

1.2 David Lubin Memorial Library

The Library is named after the man whose ideas and energy persuaded several countries to create the International Institute of Agriculture (IIA) in 1905. The IIA was the first international intergovernmental organization to deal with the problems of agriculture. It continued to function until 1946, after which its assets were absorbed by FAO. A major asset was the library, of some half million

volumes. The 1950 Special Session of the FAO Conference held in Washington, 3-11 November, decided that - "in recognition of the foresight, leadership, and outstanding contribution of David Lubin to international co-operation in the field of agriculture - the FAO Library be named "The David Lubin Memorial Library" and that the Italian Government be consulted to assure a permanent designation for the IIA collection.

In addition to the IIA collection the FAO Library currently holds around 126 000 monographs and over 13 000 periodicals titles, of which 6 500 are currently received.

An extensive 'gift and exchange' scheme has ensured a comprehensive collection of both the rare 'grey' literature (such as reports published in small quantities and periodicals not available through usual channels), particularly from countries with developing economies, as well as the relevant commercial and academic periodicals.

This historical breadth and depth of the collection make it unique as an international resource. Combined with the range of FAO staff expertise, the collections of the Library give FAO Members access to a valuable enhanced information resource.

For the purpose of this review, only the role of the FAO Library in collecting, managing and disseminating external periodicals is considered. None of the assessments or comments relates to the library's important role in the preservation, management and dissemination of FAO's own publications.

With regard to external periodicals, the Library serves two main functions:

1. **User present needs** They focus on the present information needs of their priority user groups. As well as providing access to and disseminating the relevant information sources, library services include added value in selection, interpretation and guidance.
2. **Archive** The collection is also part of the Organization's institutional memory and serves an archival function for previous aims and work of the FAO. This archival function has been an additional bonus for some Member Countries, which for unfortunate reasons, have lost part or all of their own fisheries publications.

The library is physically organised as the Main Library and four subject specialized Branch Libraries, namely Fisheries, Forestry, Nutrition and Statistics. The libraries of the FAO Regional Offices were not considered in this review, although their function, with greater decentralization, should play an increasingly important role in the Organization's information collection and dissemination activities.

The organisation of FAO's Library into subject specialized Branches whilst, at the same time, maintaining the whole as a 'single' library has several advantages. The Branch Libraries enable greater subject specialization of the collections and library services because they operate as an integral part of the host Department or Division, which they support.

1.3 Fisheries Department

The First Session of the FAO Conference in 1945 observed that there was a need to increase the total output of world fisheries by better exploitation of fishing grounds, and to make better use of the supply obtained. It reported that scientific and statistical information were deficient; improvements were needed in techniques for processing fish and conserving nutrients and that long term objectives should be to obtain larger supplies for the world's consumers.

The original Fisheries Division, which had been established in 1946, included three branches by early 1948, namely: Fisheries Biology Branch, Fisheries Technology Branch and Fisheries Economics Branch. This basic structure was maintained through 1965. The developments, which took place in the Fisheries Department from its origins until 1981, both in terms of its staff and work programmes, are

well documented by Phillips (1981). The structure of the Department and its evolution in the context of changes in global marine fisheries up to 1992 are analysed in the paper by Garcia (1992).

The Twelfth Session of the FAO Conference, in 1963, requested that measures be taken to ensure that FAO had in future years the status of being the leading intergovernmental body in encouraging the rational harvesting of food from the oceans and inland waters. In response to this request the Fisheries Division was upgraded to a Department as of 1 January 1966 and the Committee on Fisheries was established.

The United Nations Conference on the Law of the Sea, (First Conference, Geneva, 1958; Second Conference, Geneva 1960; and the Third Conference which started in 1973 and continued until the final Signing Session for the Convention on the Law of the Sea in December 1982), required the Fisheries Department to assist, in particular those developing countries, which lacked the technical capacity and facilities to take advantage of the new situation. FAO established, in 1979, a comprehensive programme of Exclusive Economic Zone (EEZ) assistance to promote the rational management and full use of fishery resources in the economic zones of developing countries. From 1973 to 1979, the Department's Fishery Economics and Institutions Division evolved, strengthening its capacity to service regional fishery bodies and to provide policy advice, necessitated by the world wide impact of UNCLOS. The Fishery Policy and Planning Division was established in 1979 and by 1980 the Fisheries Department had reached the structure which continued until the decentralization of Field Operations in 1996.

Regional fishery bodies established under the framework of FAO were to have a critical role in the execution of the EEZ programme. In 1984 the FAO World Conference on Fisheries Management and Development endorsed a Strategy for Fisheries Management and Development. The Chairman of the 1984 Conference, in his concluding remarks, highlighted such key issues as the United Nations Convention on the Law of the Sea and the sovereign rights of coastal states. The Strategy was described as "a valuable contribution to the steps being taken to achieve a New International Economic Order." (FAO, 1984).

The FAO Council had emphasized that the Strategy should include not only marine fisheries but also inland fisheries and aquaculture. In 1989, the Eighteenth Session of the Committee on Fisheries strongly supported a further substantial increase by FAO in its allocation for aquaculture and the new Aquaculture Development and Coordination Programme (ADCP). At a time of stagnant growth or even decline in capture fisheries, aquaculture has emerged as the main hope for significant increases in the supply of fish for human consumption. The statistical story is dramatic: annual production in aquaculture grew from just under seven million tonnes in 1984 to more than 25 million tonnes in 1994.

World fisheries became a market-driven, dynamically developing sector of the food industry and coastal States have striven to take advantage of their new opportunities by investing in modern fishing fleets and processing factories in response to growing international demand for fish and fishery products. By the late 1980s it became clear, however, that fisheries resources could no longer sustain such rapid and often uncontrolled exploitation, and that new approaches to fisheries management embracing conservation and environmental considerations were urgently needed.

The Committee on Fisheries (COFI) at its Nineteenth Session in March 1991 called for the development of new concepts, which would lead to responsible, sustained fisheries. Subsequently, the International Conference on Responsible Fishing, held in 1992 in Cancun (Mexico) further requested FAO to prepare an international Code of Conduct to address these concerns. The outcome of this Conference, particularly the Declaration of Cancun, was an important contribution to the 1992 United Nations Conference on Environment and Development (UNCED), in particular its Agenda 21. Subsequently, the United Nations Conference on Straddling Fish Stocks and Highly Migratory Fish Stocks was convened, to which FAO provided important technical back-up.

Noting these and other important developments in world fisheries, the FAO Governing Bodies recommended the formulation of a global Code of Conduct for Responsible Fisheries which would be

consistent with these instruments and, in a non-mandatory manner, establish principles and standards applicable to the conservation, management and development of all fisheries. The Code, which was unanimously adopted on 31 October 1995 by the FAO Conference, provides a necessary framework for national and international efforts to ensure sustainable exploitation of aquatic living resources in harmony with the environment.

1.4 Fisheries Branch Library

Established in 1967 in response to the needs of the Fisheries Department and its constituents for subject specialized information, the Fisheries Branch Library (FBL) was the first of the four subject specialized branch libraries of the David Lubin Memorial Library.

The Librarian responsible for building and maintaining the Fisheries Library collections from its beginnings until her retirement in 1989 was Clare Cuerden, a U.K. national. The extent and quality of the fisheries periodicals collection can be directly attributed to her dedication to providing high quality library and information services, not only for FAO staff, but for an international fisheries community, particularly in those countries which lacked adequate information. The global mandate of the Fisheries Department and its unique role as the international agency with responsibility for fisheries has produced a library collection unique in the breadth and depth of its coverage of fisheries and aquaculture in the developing world. The subject and geographical coverage of the collection reflects the global mandate of FAO .

The Fisheries Library has always played an active role in the information programs of the Fisheries Department, in addition to providing information services to its primary user community i.e. the staff of FAO at Headquarters and in the Field. There was significant input from the library to the programmes which created World Fisheries Abstracts (1950-1972); Current Bibliography for Aquatic Sciences and Fisheries (1958-1971); and the Marine Sciences and Freshwater and Aquaculture Contents Tables publications.

Collaboration with the libraries of institutions and partners with whom the Fisheries Department works is an important aspect in the acquisition of information. Networking with other fisheries libraries enhances resource-sharing activities and provides a forum for the exchange of expertise and information.

2. RECENT DEVELOPMENTS AT FAO

2.1 New Strategic Framework

Major changes are underway in the Organization's approach to planning and programming. While the Strategic Framework is not yet an approved source of Governing Body policy for the Organization, there is no question that the process by which it is being developed has led to significant re-evaluation of the external environment which the Organization needs to address.

Some of the practical aspects of the changes, which have a significant impact on the library, its collections and its services are:

- Decentralizing operations
- Increased use of experts from developing countries and countries in transition
- Broadened links with the private sector and non-governmental organizations
- Greater electronic access to data and textual information
- Reducing costs.

The distribution of FAO's staff in 1999 includes almost 2 300 people at Headquarters and more than 2 000 working at decentralized offices and field projects. This can be compared with the situation

in 1981 when the Headquarters staff numbered 4 018, Field Projects 3 774 and FAO regional and country offices 726.

2.2 Medium-Term Objectives and Priorities of the Fisheries Department

Giving effect to the Code of Conduct for Responsible Fisheries and other recent international fishery instruments is the major challenge facing countries in their efforts to secure long-term sustainable fisheries and aquaculture development. Within the framework of FAO's strategic objectives of sustainable food security, the Major Programme has identified five objectives for the medium-term. These are:

- to provide members with appropriate analysis and advice, including assessments of the state of world fishery resources and aquaculture, as well as assistance with strategies and technologies for sustainable food fish production. The priorities include global monitoring and strategic analysis of inland and marine fisheries and aquaculture; promotion of responsible fisheries and aquaculture development and management; and sustainable development of the small-scale fisheries sector;
- to develop and promote appropriate policies and technologies for more efficient and effective use of resources by fisheries and aquaculture industries. Under this objective, the Major Programme will assess global trends in social and economic aspects of capture fisheries and aquaculture; analyse policies and management strategies; promote improved management in coastal and inland fisheries and sustainable aquaculture development policies at national or regional levels;
- to develop and promote adoption of technical standards and international norms for improved utilization, trade, quality and safety of fishery and aquaculture products. Priorities include reduction of discards and environmental impact from fisheries; strengthening of global coordination and regional fishery bodies; increased production from under-utilized resources and low value catches; promotion of international fish trade; and coordinating and monitoring the *Code of Conduct for Responsible Fisheries*;
- to provide members with information and indicators to better forecast emergencies and disasters in fisheries and aquaculture; and
- to improve access to high quality and timely information, in support of responsible fisheries, aquaculture and trade. The Major Programme priorities are to provide advice and technical support to members and regional fishery bodies on fishery statistics and provision of fisheries statistics and information services.

The historical as well as the recent changes in FAO; the changing requirements of Members for technical and policy advice; the Fisheries Department's response to developments in global fisheries and aquaculture - all are determining factors in the Fisheries Library collection available for present and future generations.

3. REVIEW OF THE FISHERIES AND AQUACULTURE PERIODICALS COLLECTION

3.1 Aims and Objectives

The periodicals collection was reviewed primarily in terms of its relevance to the ongoing work of the Fisheries Department and the long term aims of the Organization. The collection needs to reflect the changes required for the Twenty First Century both in FAO's strategic goals and in the modern complex library.

The current challenges facing the FAO Library in general must be taken into consideration and should not be underestimated.

The aim of the review was to ensure that the breadth and depth of the collection continue to meet the standards required by the role of FAO as a centre of excellence within the field of fisheries and aquaculture information. This included:

- Providing an overview of the periodicals collection by relevant criteria;
- Ascertaining the characteristics of the collection that add value for the benefit of FAO Members (and how these added value characteristics could be developed);
- Identifying gaps in coverage;
- Making proposals to discard the older and less frequently used parts of the non-core collection;
- Exploring alternative means of access (i.e. via electronic and web-based means); and
- Proposing guidelines to determine how the core collection can be maintained.

For the purpose of this review, 'periodicals' is taken to mean publications with the same title appearing or intending to appear at regular or irregular intervals, in numbered or dated series, and generally containing separate articles. The majority of periodicals covered by this review were scientific journals, magazines, annual reports, organizational report series, bulletins and newsletters.

FBL's periodicals collection was last reviewed in 1991, before the major changes described above began to have an impact on the library services.

3.2 Review Methodology

Choice of Review Method: Many criteria affect periodicals collection management decisions and numerous decision models for collection reviews have been proposed in the library literature. Some methods of reviewing collections cannot readily be applied to specialized libraries. For example, general lending libraries inform their collection policies by reviews of lending. They can monitor and analyse the pattern of lending of particular subjects, authors and titles and from this decide collection and disposal policy. Academic libraries tend to use very detailed models based on the curriculum or course requirements of their user groups (a review of these can be found in Nisonger 1998).

Neither of these two approaches is generally applicable to special or research libraries. They normally have to take a broader view than general lending libraries and a more practical view than academic libraries. An organization like FAO, as well as having a wide range of user groups, has additional responsibilities to its Member Nations. The changes in the requirements of FAO Members and the resulting strategic planning at FAO have been outlined in sections 1 and 2 above. After due consideration of the alternative approaches available, it was decided that institutional strategy would form the main determinant for the periodicals review.

Stages in the Review: The review involved the complete collection of approximately 2 000 periodicals titles held by the FAO Library in the area of fisheries and aquaculture. It had several stages:

- Review of FAO strategy;
- Develop a set of criteria by which to determine a core collection;
- Analyse the collection against the criteria;
- Produce an overview of the whole collection; and
- Produce guidelines for the maintenance of the collection.

At each stage, the work was done in close collaboration with the librarian of FBL, the technical staff of the Fisheries Department, and the librarians of the David Lubin Memorial Library.

Main issues currently affecting the collection: The following emerge as being the main issues that have an impact for the periodicals collection. They are specifically from FBL's perspective, but many of the observations may be relevant or related to the overall policy of the David Lubin Memorial Library, to the regional office libraries and to many similar specialist decentralized libraries:

- **Increase in range of user groups.** In the FAO, two aspects of restructuring have increased the user base and demand. These are the increasing use of experts from developing countries and countries with transitional economies plus the broadening of links with the private sector and non-government organizations;
- **Change of emphasis of subject areas.** The fairly radical shift of emphasis from technical inputs to fisheries and the backstopping of field projects towards management, normative (i.e. policy and guidelines), and socio-economic aspects. Although FAO does not undertake research or manage fisheries, it needs to have a body of knowledge in these areas in order to advise managers and co-ordinate research. This issue was emphasised by the Advisory Committee on Fisheries Research at its meeting in 1997. This Committee commenting on the role of FAO in global international fishery research stated: "that FAO has and should maintain: the necessary infrastructure, such as data collections, libraries and other information sources". (FAO, Advisory Committee on Fisheries Research. 1998);
- **A decline in 'Gift and Exchange'.** Overall, there is a tendency for organizations to stop providing publications on exchange. The 'Gift and Exchange' programme has been a very important source of materials for the FAO libraries. Historically, it allowed the periodicals subscriptions budget to be maintained at a lower level than many libraries working in these subject areas. Maintaining a 'Gift and Exchange' scheme is labour intensive, involves a large amount of printed document handling, a lot of time in identifying relevant literature and in establishing and maintaining contacts with exchange partners. A review of the gift and exchange programme was being undertaken as a separate exercise by the David Lubin Memorial Library;
- **The 'hybrid' library.** It is also a time of increasing complexity for libraries throughout both the developed and developing world. Current issues of many commercial periodicals are now available in digital form as well as, or instead of, print form. But the state of development is such that libraries at the present time can be neither fully print nor fully digital. The most workable model is one of a hybrid library combining the best of both the print and the digital products and services;
- **Archival functions.** Two aspects are significant. First, older printed material must be maintained. This is especially important for those developing countries, which, for various reasons, have no archive. The second aspect is to assess if and how electronic journals can be archived;
- **Reducing costs**. This is a continuing pressure on all library budgets. A major cost is labour. A vast number of documents – the majority of them periodicals - are sifted, sorted and shifted as the foundation for many of the library services provided. Eliminating unnecessary periodical acquisition and handling will enable the staff to maximise the use of their time and expertise in serving their increasing range of user groups. The disposal of irrelevant periodicals titles is of some small assistance in keeping workload in line with resources.

Overall, the need is for a wider range of good quality information not a narrower base.

3.3 Criteria for the Core Collection

When the review of strategy was complete, it was possible to determine the main criteria for the core collection. Other relevant criteria were determined using several different approaches. These included cross-checking against various available listings, for example, against the Aquatic Sciences and Fisheries Information System (ASFIS), which monitors fisheries publications. The value of the criteria was largely determined from the experience and specialist knowledge of those involved in the review, including members of the Fisheries Department technical staff; and in discussions with the FAO Library staff.

The relevant criteria were organised into the five 'Facets' as follows:

- Prime Facets
  1. Subject Area
     - i Present FAO strategy
     - ii Historic interest – retain
     - iii Historic interest – discard
  2. Geographic Area

- Secondary Facets
  3. Language
  4. Availability
  5. Holdings

FACET 1 - SUBJECT AREA

Subject area is the main criterion used to determine the core collection.

The Subject facet is divided into three sections. Two sections represent subjects that should be retained as forming the core collection - Present FAO Strategy (1994-); and Historical Interests. The third section includes subject areas, which are non-core and should be considered for discarding. The following listing is in line with the FAO's current strategy.

i. Present FAO Strategy (1994 -) - retain

Statistics:
- fish catches
- aquaculture
- commodities & trade
- fishing fleets
- fishers
- fish consumption

Fisheries/Aquaculture Resources:
- marine resources/inland resources
- resource management/stock assessment ;
- production
  - fish feeds
  - rearing technology
  - improved strains/genetics
  - ranching
  - control of diseases
  - environmental management
  - rehabilitation of ecosystems
  - protection of diversity

Fisheries Policy:
- management/development both capture and culture
- socio-economic aspects of planning policy
- under-exploited species, small pelagics
- cost-benefit methodologies
- organizational and institutional infrastructure
- monitoring, control & surveillance of fisheries
- private sector expansion
- fishery waters/limits etc.
- assistance to small island developing states

Fishery Technology

fishing vessels
fishing gear and methods
storage and transport
instruments, tools, equipment
fishery grounds and water areas
fishery oceanography and limnology
Utilization of marine/freshwater resources
post harvest activities
marketing
gender issues
socio-economic developments
reduction of waste
quality/safety of product
international trade-standards

ii Historic Interests - retain

Among the items of historic interest to be retained are:

- Taxonomy related to fisheries and aquaculture
- Pollution related to fisheries and aquaculture
- Oceanography related to fisheries and aquaculture
- Environmental studies related to fisheries and aquaculture

An important criterion in the FBL collection is holdings which pre-date FAO and which are part of the IIA Collection. These must be retained because of the legal requirements, even if by other criteria the periodical would be coded as non-core.

iii Historic Interests - dispose

Some titles kept in the past to reflect past strategy are no longer a current priority. For example, pure oceanographic issues are not a priority concern of FAO, and are well covered by the libraries of oceanographic institutions and agencies. The following subjects of historical interest were therefore coded for disposal:

- Pure Taxonomy
- Pure Biology/Science
- Pure Pollution
- Pure Oceanography
- Pure Environmental Studies
- Developed country fisheries with only local descriptive or administrative information. This does not include those with theoretical, methodological or applied aspects of relevance to fisheries and aquaculture in general.

FACET 2 – GEOGRAPHIC AREA

The geographic area facet ranks the area of interest or publication of a periodical to reflect FAO's strategic interests. One priority is material produced by or about fisheries in developing countries and those in transitional development. Another priority area is publications by or relating to International and Regional Fishery Commissions and Bodies. Developed countries have a lower ranking in this particular facet, given the more ready availability of their publications elsewhere. The ranking is as follows:

1. G77 Countries;
2. Transitional Development;

3. International/Regional Fishery Commissions;
4. FAO Involvement in the development of fisheries of the country;
5. Developed Countries.

FACET 3 – LANGUAGE

The language facet is limited to four major 'blocks' of languages. With almost 200 Members, the stock needs to span a wide range of languages. Where a periodical is available in several languages, FAO may need to hold copies in all or several of its "core languages":

1. FAO core languages (Arabic, Chinese, English, French, Spanish)
2. Other European (Romance)
3. Cyrillic
4. Ideographic

FACET 4 - AVAILABILITY

The availability facet indicates how common or rare the title is in other libraries. A preliminary attempt was made to categorise the FBL's periodical titles by their availability in other libraries. A priority is to keep very rare material, defined here as available in few libraries and not easily available through inter-library loan:

1. Very Rare
2. Rare
3. Uncommon
4. Common

FACET 5 - HOLDINGS

The final facet, holdings, was used to aid final analysis. It indicates the status of periodical as follows:

- Current
  - Current (No title changes)
  - Current (Latest title)
  - Current (Previous title)
- Periodical ceased publication
  - Ceased (No title change)
  - Ceased (Latest title)
  - Ceased (Previous title)
- Holdings ceased, but periodical continues
  - Ceased (No title change)
  - Ceased (Latest title)
  - Ceased (Previous title)

COLLECTION RATINGS

An overall rating system was devised. The periodicals could then be coded and grouped for action as follows:

Code		Group Action
5	Present strategy – current holdings:	
	5A Core	Retain
	5B Core (time limited holdings)	Retain for time indicated

4	Present strategy – ceased or marginal holdings:	
	4A Core – ceased	Retain
	4B Marginal	Retain
3	Previous strategy:	
	3A Core – current	Retain
	3B Non-core current	Cancel and dispose
2	Previous strategy:	
	2A Core – ceased	Retain
	2B Non-core – ceased	Dispose
1	Outside strategy:	
	1A Non-core – current	Cancel and dispose
	1B Non-core – ceased	Dispose
	1CNon-core – (not specifically fisheries)	Transfer within FAO

All the facets and rankings were tested against a sample of periodicals titles and, after further discussions, refined and finalised.

4. ANALYSIS OF THE COLLECTION

The FBL periodicals database is maintained using mainframe CDS/ISIS. For the review, a listing of all 1 911 periodicals was produced in a computer spreadsheet format in Microsoft Excel. Each title was assessed and ranked against the five facets listed above, and then given an overall rating.

Two examples by way of illustration:

- Bulletin Statistique du Secteur de la Mer. The subject area of this periodical is statistics, so it reflects present FAO strategy. It is published in French Polynesia, a G77 country. The language is French, one of the FAO core languages. It is uncommon. It is a current holding. The overall rating is therefore 5A, and the recommendation is that the title should be kept.
- Kyushu University Fishery Research Laboratory Report. The subject areas are mainly fish physiology, non-fisheries related pollution and general hydrobiology. These reflect a previous strategy of FAO but they are no longer priority interests. The periodical is published in Japan, a developed country, and so is given a lower ranking for geographical area. The language, Japanese, falls in the low priority ideographic category. The journal has ceased publication. The overall rating is 2B and the recommendation is that the title should be disposed of.

The analysis was recorded on the spreadsheets, in Microsoft Excel, and gave the following overall results:

- 1 708 titles to be retained as the **core collection,** of which 934 are current.
- 142 titles to be considered for **disposal**
- 55 titles which directly include fisheries held in other FAO libraries
- 6 titles which were just cross references to the preferred title
- 5 titles identified as gaps in the core collection (in the sense of titles never taken which meet the core criteria).

An overview of the periodicals reviewed

		Code	No.	Retain	Retain for time	Stop and dispose	Dispose	Transfer within FAO
Present strategy:	Core Current	5A	764	✓				
	Core Current (Time Limited Holding)	5B	156		✓			
	Core Ceased	4A	639	✓				
	Marginal	4B	75	✓

	Non-Core Ceased	2B	100				✓	
Outside strategy:	Non-Core Current	1A	5			✓		
	Non-Core Ceased	1B	9				✓	
	Non-Core Not Fisheries	1C	23					✓
Gaps identified			5 +17					

4.1 Core Collection

The core collection comprises 1 708 titles. These are listed in Appendix A. The core collection of FBL periodicals is undoubtedly the most comprehensive and relevant collection of fisheries-related periodicals with emphasis on development and tropical fisheries. An analysis of the core periodicals by country of publication, given in Appendix B, gives an indication of the geographical spread.

The core current titles are predominately from the subject areas relevant to the post 1994 strategy. There are only 14 current titles which are from the pre-1994 subject areas (previous strategy or historical) but which the analysis reveals as being worth continuing for other reasons. This raises the general point that periodicals should be reviewed on a regular basis, and whenever organizational strategy changes, to keep the collection up-to-date and relevant.

The core ceased titles contain a higher proportion of historical material. Many of the 60 titles with this Collection Code (2A) may seem, at first glance, to be better suited for disposal. The criterion that will have overridden the disposal decision will have been the pre 1952 holding of the titles from the IIA Collection.

The 75 titles in the marginal category are border line by the criteria system used but would seem to be worth keeping at this time, for reconsideration by the next review.

Among the core collection are 22 titles which are very rare and 127 which are rare. The majority of these are/were published in developing countries. Many of them may no longer be available in the libraries of their country of origin and so it is important for them to be retained by FAO.

Coverage of the relevant areas is excellent and the effectiveness of the previous collection policies was evident. The criteria established by this review of the whole collection could also be applied to individual titles, which come up for consideration in the near future and could prevent significant gaps from appearing.

4.2 Periodicals for Disposal

The analysis indicated 33 current titles and 109 ceased titles for consideration as periodicals for disposal. These are listed in the Appendix C. The current titles are 28 current titles relating to previous strategy issues (Code 3B). Just 5 titles are non-core subjects outside of any strategy (Code 1A). Again, this reflects the success of previous collection policies. Of the ceased titles, 100 relate to previous strategy (historical) (Code 2B) and 9 are non-core outside of any strategy (Code 1B).

The titles suggested for disposal will need to be considered by the FBL Librarian, Fisheries Department Library Committee and Fisheries Department technical staff in case there are other, overriding factors.

The majority of the titles recommended for disposal would seem to be of little or no use to libraries in developing countries. This is because the titles tend to relate to temperate zone issues. Some would possibly be useful to the transitional economy countries of Eastern Europe.

4.3 Proposed Routes for Disposal

FBL is currently considering the following routes for disposal of periodicals titles. Each disposal should be considered in the light of the circumstances prevailing at the time.

Other libraries in Rome:

This channel would strengthen collaboration with libraries in the FAO host country, which reciprocate with inter-library loans for FAO staff, supplying between thirty and fifty percent of all photocopy requests. It would also provide easy access to these marginal titles should they be requested in the future:

- Instituto Centrale per la Ricerca Scientifica e Technologica Applicata al Mare (ICRAM)
- Universita degli Studi di Roma 'Tor Vergata', Dipartimento di Biologia (UDSR)
- European Centre for the Development of the Mediterranean Area (CESUAM)
- Universita degli Studi di Roma 'La Sapienza', Diparttimento di Biologica Animale e dell' Uomo (USRLS)

Fisheries Library Networks:

- European fisheries libraries through the 'European Association of Aquatic Sciences Libraries and Information Centres' (EURASLIC)
- International through the 'International Association of Marine and Aquatic Sciences Libraries and Information Centres' (IAMSLIC)

4.4 Periodicals elsewhere in the FAO Library

Fifty-five titles of direct relevance to the Fisheries Department and its core activities were held, or were recommended for holding, in other parts of the David Lubin Library. Obviously there are many more periodicals in the other FAO libraries, which are important for fisheries and their availability or continued access is essential. Since each library reviews its periodicals holdings at different times, it is important that a 'liaison before disposal' policy is in place in order to ensure that the interests of all relevant parties are adequately represented when these titles are next reviewed.

4.5 Gaps in the Current Collection

There were few meaningful gaps in the core collection in the sense of periodicals never taken which ought to be taken. These titles are identified in Appendix D for possible acquisition or, as they are available electronically, for access.

Unfortunately, other gaps are beginning to appear in the collection, also shown in Appendix D. The main causes are:

- The declining periodicals budget and cancellation of periodical titles. Access to the full-text electronic periodical is almost always an additional cost dependent upon the print subscription;
- Reduced resources of staff to identify and acquire the valuable grey literature and problems with the exchange programme;
- Reduction of the number of titles received free of charge or via other FID programmes or projects, for example: reduced FAO input to ASFA; the termination of the ASFIS current awareness publications; fewer fisheries projects.

5. ISSUES GUIDING FUTURE COLLECTION DEVELOPMENT

5.1 Alternative Means of Access

The transition from holdings of print periodicals to the storage of, or online access to, selected full-text periodicals in digital form is an ongoing process.

There are both benefits and constraints in providing alternative access to periodicals via electronic means. Within fisheries the range of electronic titles and abstracts services available on the Internet and CD-ROM, as well as the more recent electronic full text periodicals services, lags behind other more marketable subject areas, but is improving. The benefits include the ability for multiple users to access the periodical simultaneously; currency of information; powerful searching tools; convenience of access to the library at one's own desk 24 hours a day, etc. The constraints, however, have major resource implications. The area is rapidly changing and developing so needs constant monitoring. Most electronic periodicals cost more to purchase and also need a site licence for multiple access (with implications for both the headquarters and the regional offices). There can also be hidden costs in the lack of a permanent archive and the future policy of commercial publishers. At present the publishers retain the digital archive and the customer pays for access each year, having serious implications for future generations and their ability to pay.

The Internet itself through the World Wide Web (WWW) offers a vast range of information of interest to the users of FBL. The quality and usefulness of many of the WWW information sources are superfluous, monitoring and producing guides to relevant sites adds considerably to the workload. The

trend towards password controlled or subscriber-only sites is also adding to the complication of structured access to information resources.

Electronic services are generally of benefit to the users and enable the library to provide more specialized and targeted services. At the same time they involve an extra workload for library staff and add to the overall financial requirement of the libraries.

FAO and other special libraries have another problem with these services - subject coverage. Retrospective coverage is usually limited to the last three or four years of any periodical title. Many service providers cover a large number (in the thousands) of periodical titles, which can make them cost effective for academic organizations. This is not necessarily the case for specialized organizations and research centres. At the time of the periodicals review, less than one percent of the Fisheries Library's core periodicals was available as electronic full text. The percentage has increased significantly even in recent months. However, providing access to these involves extra costs negotiating site licences with more than one provider, and access to the full-text electronic periodicals is available only as an additional cost to the print subscription.

In the light of the above, there are many reasons why the move from print to electronic periodicals should be a gradual, evaluated programme.

5.2 Publications of G77 Countries

Information exchange with the G77 countries forms a key part of the work of FAO. Many G77 and Transitional Economy countries have zero or very low direct output of periodicals literature relevant to FBL. Yet the material produced is often the only source of such information, and is therefore essential for the work of the Fisheries Department. Distribution is limited, for various reasons the publications have been lost or damaged in the countries of origin and FAO provides an important central holding for such material.

FBL attaches considerable importance to monitoring the output of these countries with a view to future serials' acquisition. In addition to their value as unique sources of information for FAO staff, visiting experts and consultants, they reach an international audience as a result of their inclusion in the ASFA database. FAO Fisheries Department monitors and seeks to ensure coverage of this material in ASFA, disseminating the results of research and development which otherwise would not be known. ASFA is internationally recognised as the primary database for aquatic science research. An important function of the Fisheries Library and the FAO ASFA Group is the collection and dissemination of fisheries and aquaculture information produced by researchers and institutions in G77 countries. ASFA has provided a source for international and donor agencies working to improve the monitoring and co-ordination of research, for example the Africa Caribbean Pacific (ACP) - European Union (EU) Fisheries Research Initiative.

The current situation for periodicals in G77 counties were, as far as possible, identified and listed as an aid to future acquisitions. Librarians in G77 countries may find the following lists useful in monitoring new material and FBL would be interested to be notified of any such material.

The Internet offers great potential for publishing and disseminating this material, to an extent that was not possible due to the high costs of printing and mailing. Many organizations are providing the opportunity for institutions in G77 countries to disseminate their publications via the WWW on a cooperative basis, until they have full Internet facilities themselves.

List 1 - G77 countries with no known relevant periodical titles either current or ceased

Afghanistan
Antigua + Barbuada
Barbados
Bhutan
Bolivia
Bosnia & Herzegovina
Botswana
Brunei darussalam
Burkina Faso
Cambodia
Cameroon
Cape Verde
Central African Republic
Chad
Comoros
Costa Rica
Djibouti
Dominica
Dominican Republic
Equatorial Guinea
Eritrea
Ethiopia
Gabon
Grenada
Guatemala
Guyana
Haiti
Jordan
Laos
Lebanon
Lesotho
Liberia
Malawi
Mali
Marshall Islands
Micronesia
Mongolia
Nepal
Niger
Oman
Palestine
Paraguay
Rwanda
St Kitts & Nevis
Sao Tome & Principle
Somalia
Sudan
Suriname
Swaziland
Syrian Arab Republic
Togo
Yemen

List 2 - G77 countries whose relevant periodicals have ceased

Angola
Bahamas
Bangladesh
Cyprus
Malta
Mauritius
Nicaragua
Panama
Samoa
Viet Nam

List 3 – G77 countries with only 1 current relevant periodical

Belize
Benin
Burma (Myanmar)
Burundi
El Salvador
Gambia
Guinea
Guinea-Bissau
Hondurus
Iran
Libya
Qatar
Sierra Leone
St Lucia
St Vincent & Grenadines
Tonga
UEA

List 4 - Transitional economies with no relevant periodicals in FBL collection

Albania
Armenia
Azerbaijan
Belarus
Bolivia
Estonia
Georgia
Kazakhstan
Kyrgyzstan
Latvia
Lithuania
Nauru
Pitcairn Islands
Tajikistan
Turkmenistan
Tuvalu
Uzbekistan

5.3 Collection Policy Statement

Every library collection is established for one or more definite purposes. A collection development and management programme contributes to the achievement of those purposes. In a cost- and user- beneficial way it:

- organises and directs the processes of acquiring, or providing access to materials and data, integrates them into coherent collections,
- manages their growth and maintenance, and
- de-selects them when appropriate.

Librarians can attempt to reduce the impact of challenges on their services by working with their respective organization and by agreeing a focused library collection development policy within the overall information policy framework. When a review of periodicals has taken place, the criteria which were identified (the facets) should form the basic guidelines for collection development, to be reviewed and updated as necessary.

An outline for a Collection Policy Statement is given below. Such statements can be reviewed at regular intervals to verify that goals are being met and changes in organizational goals are being addressed.

COLLECTION DEVELOPMENT POLICY STATEMENT

An outline

INTRODUCTION
Purpose and audience
Institution and clientele served
Mission Statement and Goals of CMDP
BRIEF OVERVIEW OF COLLECTION
History
Subject – emphasis and de-emphasis
Collection locations
ORGANIZATION OF PROGRAMME
Staffing
Liaison
Budget
Management of Collection - preservation, storage, replacement, de-selection and access
Cooperation
Equipment & Technical Support
GENERAL COLLECTION MANAGEMENT
Types of publications:
Rare and archival material
Languages and Translations
FAO Publications
Popular/Scholarly
Access:
Multiple Copies
Reserve/reference
Access policy
DETAILED ANALYSIS OF SUBJECT COLLECTION
Collection levels
Languages

The Collection Policy Statement should cover a disposal policy, as well as acquisition and maintenance policies. In decentralized libraries a system of liaison before disposal is essential.

6. RECOMMENDATIONS

In summary, some general points emerge which are relevant to periodicals collection policy in many specialized libraries:

- Organizational strategy should be the main determinant of collection policy;
- Collection policy should be defined in a collection policy statement;
- A review of collection policy should take place whenever strategy changes; and
- The transition from print to electronic access should be evaluated in terms of cost-effectiveness and long-term goals. For the present, the 'hybrid' library remains the best option.
